

Access to Online Library Resources using VPN

Connecting to Cisco AnyConnect Duke VPN while off-campus sometimes interferes with access to online library resources.

If you cannot access an online resource while working off-campus and connected to Duke VPN, double-check to make sure you have the **Group** set to **“Library Resources Only.”**

The option to select **“Library Resources Only”** is in the dropdown **above the NetID and Password** fields, as seen in the screenshots below:

When connected to the **“Library Resources Only”** Group, you should be able to successfully access online resources using links from the library’s website after first signing in with your Duke NetID and password. You should also be able to access other non-library Duke resources, such as network drives.
